DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 4 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear how net air flow is maintained to both the air supply port and the outlet port. Claims will be interpreted as best understood.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 3, 4, 5, 7, 8, and 11-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Alferness '015. Alferness shows a method comprising: applying an oscillating compressive force which includes a steady state component (30, column 4, lines 55-57) and an oscillatory component (10, column 4, lines 34-39), and supplying air pressure to a mouthpiece having a mouthpiece chamber (24), an outlet port (26), and an air supply port (22), the pressure having an oscillating component (column 4, lines 34-42) and a steady state component (column 4, lines 63-67) and a "net flow", the pressures inherently "counteracting" since they originate from the same source, both pressures being "effective".

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alferness alone. Alferness shows all the method limitations of the invention as set forth in the previous paragraphs of this office action but does not disclose values of relative pressure. However, such limitations are considered obvious design choices based on user preference to suit various needs and applications, which are further capable of being accomplished by Alferness.
